Basler Ürün Dünyasına Hoşgeldiniz

Bu broşür, yapay görme uygulamanıza yönelik tüm görüntüleme bileşenlerimiz hakkında kapsamlı bir genel bakış sunmaktadır. Kamera serilerimiz, lenslerimiz, görüntü yakalama kartlarımız, aydınlatma modüllerimiz, yazılımlarımız, gömülü yapay görme modüllerimiz, çözümlerimiz veya diğer görüş bileşenlerimiz hakkında bilgi arıyorsanız, aradığınız bilgiyi burada bulacaksınız. "Somut gerçeklere" (yani en önemli ürün özellikleri ve spesifikasyonlara) ek olarak, Basler'i ve ürünlerimizi özel kılan şeylerin ne olduğunu buradan öğrenebilirsiniz.

Hemen her uygulama için uygun ürünlerle sektördeki en geniş ürün yelpazelerinden birine sahibiz. Dünya çapındaki satış organizasyonumuz doğru seçimi yapmanıza yardımcı olmaya hazırdır. Ekibimizle iletişime geçin; bireysel görme uygulamanız için doğru yapay görme bileşenlerini birlikte bulalım. baslerweb.com/sales

Online Yardımcı Araçlarımız

Güçlü satış ekibimizin yanı sıra, yapay görme sisteminize uygun bileşenler için araştırma ve karar verme sürecinizde size yardımcı olacak kapsamlı online araçlar sunuyoruz.

baslerweb.com/tools

Bu araçlardan birisi; görüş sisteminiz için en uygun görüntüleme bileşenlerini yapılandırarak size yardımcı olan **Vision System Configurator**'dir. Adım adım ilerleyerek kameralar, lensler, güç ve veri kabloları ve diğer aksesuarları seçebilirsiniz: baslerweb.com/vision-system-configurator

Basler Hakkında

Basler AG, yapay görme alanında uluslararası lider ve uzman bir şirkettir. Bütünleyici, geniş bir yapay görme donanım ve yazılım portföyü sunmaktadır. Ayrıca müşteriye özel ürün veya çözümler geliştirerek müşterilerin vizyoner uygulamalarındaki sorunlarını çözmelerine yardımcı olur. 1988 yılında kurulan Basler Grubu, Ahrensburg, Almanya'daki genel merkezinin yanı sıra Avrupa, Asya ve Kuzey Amerika'daki diğer satış ve geliştirme ofislerinde yaklaşık 1000 kişiyi istihdam etmektedir.

Odaklandığımız Sektörler

Fabrika Otomasyonu

Medikal ve Yaşam Bilimleri

Lojistik

Akıllı Ulaşım

Perakende

Yönetim Kurulu

*Kesinlikle inanıyoruz ki yapay görme teknolojisindeki ilerlemeler yaşam kalitemizi artırıyor. Bu nedenle biz teknolojiye **Görme Gücü Veriyoruz.***

ACCELERATE YOUR VISION

Save time with Basler’s perfectly matched suite of vision products. Our complete line of hardware and software is designed to meet your requirements: create the perfect solution from harmonized individual components or request a custom-engineered vision system for the most challenging applications.

BASLER'S VISION COMPONENTS

Basler's Components Enhance Your Vision

An image processing system needs more than just a camera. Only a lens, light source, reliable data transfer and additional components such as frame grabbers, trigger cables, acquisition cards and power supplies turn a vision system into a functioning unit. High standards must be met in terms of quality, reliability and long-term availability with a good price/benefit ratio.

Basler offers a large selection of vision components that match each other perfectly. Carefully selecting compatible and reliable components for our portfolio is our top priority, as we strive to provide the right needs-oriented setup for complex, efficient systems as well as for cost-effective solutions.

As a leader in technology, Basler is substantially involved in the development of new standards and offers all of the necessary, perfectly matched vision components from one source. As a result, our customers benefit from the superior reliability of their entire vision system.

Need Help Selecting the Right Vision Components for Your Application?

Select compatible components for your vision system with the help of our Vision System Configurator: baslerweb.com/vision-system-configurator

Step by step you can pick cameras, lenses, power and data cables as well as other accessories. We ensure that the selected components fit together.

Typical set-up of a camera system

Basler's Vision Components – Benefits at a Glance

Cost savings

- In-house developments or developments in cooperation with other companies
- Needs-oriented products
- Complexity reduction thanks to perfectly harmonized components
- One-stop shopping
- Single point of contact (spoc)
- Long-term availability

High reliability

- Matching, certified and tested vision components
- Regular function and interoperability tests
- Provision of all required certifications

Good delivery times & long-term availability

- In-house logistics
- Same deliverability for camera and compatible accessories
- Spare parts supply throughout the entire lifecycle

Easy system setup & simple integration

- Broad and harmonized product portfolio
- Time-saving tools to configure and select components
- Professional consulting before and after the buying decision

AS EASY AS CONNECTING THE DOTS. SAVE TIME. SAVE MONEY.

your camera

pylon Software Suite

Easy and stable connection of your vision applications with Basler cameras and hardware components requires the right software in place. The Basler pylon Software Suite consists of reliable, certified drivers for all kinds of camera interfaces, a powerful and easy programming interface, and a comprehensive set of tools for camera and system set-up. Thanks to the pylon vTools, you can develop complete machine vision, medical and other applications with just a few lines of code.

CONNECT Easy link to Basler cameras

Many ways to connect – With pylon you can connect your application in a standardized way via a pylon GenTL producer, or by writing your own code using one of the pylon APIs. With the pylon APIs, developers can either use convenient universal functions that encapsulate the GenICam standard, or use functions for access directly via GenICam.

GenICam and GenTL – Complex details of these standards are encapsulated by the pylon APIs.

Rich choice of supported interfaces – pylon allows connecting your cameras via USB3, GigE Vision, CoaXPress, MIPI, Camera Link and others. If your application connects via one of the pylon APIs, switching from one interface to another becomes possible with minimal code changes.

CONFIGURE Powerful tools for camera set-up

Get the best possible image – pylon provides you with a rich set of powerful tools for getting the best image out of your Basler camera, such as Vignetting Correction, Sharpness Indicator, Bandwidth Manager and many more.

Fast access to product documentation – The pylon Viewer allows easiest centralized access to comprehensive camera feature documentation, including code samples.

Use the tools in your language – pylon tools can be used in English, Chinese, Japanese and Korean language.

Integrated camera emulator – pylon comes with a camera emulation that allows testing multi-camera connectivity without having to connect any camera.

your vision

Highlights

- Easy connecting of Basler cameras via GenTL standard
- Productivity and fast results with pylon SDKs
- Stable, certified drivers for Windows, Linux, macOS and Android
- Rich choice of supported interfaces
- Powerful tools for camera set-up

For more information, please visit baslerweb.com/pylon
See the pylon highlights in our video:

DEVELOP

High productivity and fast results

80% time savings – Studies show that developers using a pylon API finished tasks in only 20% or less of the time that they needed to complete the same

tasks with other comparable APIs.

Easy to learn – With the easy-to-learn pylon APIs and context-related developer documentation, even new employees can become productive right away.

Faster results – The simple structure of the pylon APIs leads to fast development results, leaving the developers more time for other things.

Simple deployment – pylon's copy deployment concept allows installing all necessary pylon components used for your application just by simple file copies.

RUN

Stable operation on all platforms

Certified drivers, reliable performance
– Tried and used thousands of times, certified, and the performance speak for the stability of the pylon drivers, which have been optimized continuously for many years.

Real-time performance – In comparison studies, pylon demonstrated an outstanding performance with regard to latency and jitter, making pylon suitable for stable image acquisition even in real-time applications.

Platform-independent – With the pylon APIs, the target platform of the developed application doesn't play any role. It's very easy to switch from a Windows environment to a Linux ARM environment without major code changes. This makes pylon perfectly suitable for the development of embedded systems.

pylon vTools

Seamlessly Integrated Image Processing with pylon

Use pylon vTools to quickly and easily create high-performance image processing functions for your applications. Design and test intelligent structure recognition, micrometer-precise object positioning, or robust code recognition and integrate everything into your own application – together with camera control and image acquisition, precisely tailored to Basler's camera portfolio.

Before purchasing, Basler's pylon vTools can be tested for free in the pylon Software Suite. Simply download pylon and activate the included pylon vTools with a valid email address for an 80 days demo period.

Highlights

- Seamlessly integrated image processing with pylon
- High performant and robust
- Precisely matched to Basler cameras
- Easy and fast to create visually
- Easy to integrate into existing architectures
- Cost-optimized module cutting

For more information, please visit baslerweb.com/pylonvtools

Easy creation in pylon Viewer

Create image processing functions quickly and easily in the pylon Viewer's Workbench. Here you can select, insert, and configure individual processing steps as vTools. By connecting single vTools together, you can create and test complete image processing workflows. Save image processing workflows created in the Workbench as recipe files, to use them in your own applications.

Flexible integration with pylon APIs

To integrate image processing functions into your own applications, the popular pylon APIs offer a variety of simple functions for loading and executing recipe files, and for evaluating the results in your program code. Adjust the settings of your application via recipe file using the pylon Viewer – without having to change or recompile the application code.

Commercial licenses can be bound to computer or a dongle. System-bound license licenses do not require any additional hardware but are bound to one system. Dongle licenses can be transported from one system to another. You can choose what fits your needs best!

BLOB Analysis – based object recognition

This license includes vTools for thresholding based object recognition, to identify and analyze regions, objects and structures.

Basic:

Absolute thresholding, auto thresholding, and relative thresholding – including vTools for region morphology, object filtering, and feature extraction.

Color BLOB Analysis – Machine learning-based object recognition

The vTools for Color BLOB Analysis contain machine-learning based object recognition to identify and analyze regions, objects and structures.

Basic:

Training and application of a model for one class – including vTools for region morphology, object filtering, and feature extraction.

Geometric Pattern Matching – Edge-based algorithm for simple and robust recognition of shapes, logos and objects

The license for Geometric Pattern Matching provides vTools for easy training of shape models and adjustable recognition of trained shapes on live images.

Basic:

Single pattern search, 360° rotation, without further scaling.

Pro:

Single pattern search including scaling, adjustable angle and polarity.

Template Matching

With this license user-friendly and high-performant correlation based matching can be done on live images.

Starter:

Single pattern search at defined rotation levels.

Basic:

Single pattern search, 360° rotation.

Calibration and Rectification – Calibration for precise transformation from pixel to real world coordinates

This license comes up with a vTool to quickly and easily calibrate cameras for distortion correction and real world coordinate transformation.

Basic:

Single image, single camera calibration for entocentric cameras.

Pro:

Single image, single camera calibration for entocentric and telecentric cameras

Measurements – Measurement of distances between edges along a line

Use a live image from a connected camera or load an image from a file and draw a measurement shape on it.

Basic:

Measure distances between edges along a line.

Pro:

Measure along lines and geometric shapes

Preprocessing - High performant image preprocessing

For arithmetic operations as well as smoothing and morphology operations on images. With these high performance algorithms image features can be enhanced, masked or weakened, to improve and optimize for further image processing steps.

Starter:

Arithmetic, smoothing and morphology image operations.

Basic:

Basic: Arithmetic, smoothing, enhancement and morphology image operations

QR Code Reading - Fast and robust recognition of all types of QR codes

The QR Code Reading license comprises high performance vTools for recognizing and decoding QR Codes.

Starter:

For up to three QR codes per image, dark on bright background, no timeout.

Basic:

For up to three QR Codes per image, dark on bright background.

Pro:

For an unlimited number of QR codes per image, adjustable polarity, and enhanced recognition rate.

Barcode Reading - Fast and robust recognition of all types of barcodes

The Barcode Reading license covers vTools for recognizing and decoding bar codes of up to 28 different bar code types with best-in-class recognition rates.

Starter:

For up to two barcodes per image and one type of barcode instance, no timeout.

Basic:

For up to two barcodes per image and one group of barcode types per instance.

Pro:

Unlimited number of barcodes per image from each of the 28 different barcode types.

PDF417 Code Reader

This licenses include pylon vTools for PDF417 code recognition and decoding. These easy-to-use tools provide the fastest route to exceptional PDF417 code recognition with unmatched accuracy.

Basic:

For up to three PDF417 codes per image, dark on bright background.

Pro:

An unlimited number of PDF417 codes per image, adjustable polarity, and enhanced recognition rate.

Data Matrix Code Reader – Fast and robust recognition of all types of Data Matrix codes

This license includes vTools for best-in-class recognition and decoding Data Matrix Codes.

Starter:

For up to three Data matrix codes per image, dark on bright background, no timeout.

Basic:

For up to three Data Matrix Codes per image, dark on bright background.

Pro:

For an unlimited number of Data Matrix Codes per image, adjustable polarity, and enhanced recognition rate.

Aztec Code Reader

Aztec code reading licenses include pylon vTools for recognizing and decoding Aztec codes. Easy to implement, they provide the fastest path to powerful Aztec code recognition with best-in-class recognition rates.

Basic:

For up to three Aztec codes per image, dark on bright background.

Pro:

An unlimited number of Aztec codes per image, adjustable polarity, and enhanced recognition rate.

Arithmetic, smoothing and morphology image operations.

VisualApplets

VisualApplets enables FPGA programming using a graphic user interface (GUI) without any hardware programming. The ability to program FPGAs via dataflow models makes it easy for software developers and application engineers to intuitively create unique designs for complex image processing workflows in just a few steps. The function and ease of the software has earned it several awards.

The latest VisualApplets version combines all former standard extensions into a single license to empower your FPGA development.

Highlights

- Access to FPGAs in image processing hardware
- Implement unique image and signal processing applications
- Create and process complex applications using preconfigured sample applets
- Programmable frame grabbers are available pre-licensed for use with VisualApplets

For more information, please visit baslerweb.com/visualapplets

VISUAL APPLETS

VISUAL PROGRAMMING OF FPGAS OF IMAGE PROCESSING APPLICATIONS

IDE Licenses [Single/Multi-User]

The IDE Standard license contains everything you need for straightforward FPGA programming of image processing devices. It is the fast and easy way to begin your image processing application.

VisualApplets Embedder

VisualApplets Embedder allows you to equip the FPGA hardware of third-party image devices with VisualApplets. With this, you can quickly customize the integration for your specific image processing application, allowing manufacturers and end users alike the flexibility of programming individual devices or complete product lines.

VisualApplets Protection

VisualApplets Protection secures your design and IP know-how by allowing individual applets and frame grabbers to be securely encoded with a lock. Your VisualApplets designs and IP are then fully protected and encrypted to the FPGA hardware.

AREA SCAN CAMERAS

Basler ace 2

As versatile as your application

The ace 2 offers excellent image quality thanks to state-of-the-art CMOS sensor technology, including sensors for different wavelength ranges, with a choice of USB 3.0, GigE or 5GigE interface. Tailored to your different vision requirements, you always get the right camera.

Highlights

- Two product lines: ace 2 R Basic and ace 2 R Pro – differ in the scope of integrated features
- Image acquisition in the visible and invisible light spectrum with ace 2 X visSWIR
- Broad portfolio with latest CMOS sensor technology for different vision needs
- Coordinated components for the vision system from a single source

For more information, please visit
baslerweb.com/ace2

Unique Features from Basler

Besides the popular PGI feature set the ace 2 R Pro cameras also include our new Beyond features which are especially characterized by the fact that their functionality is unique in the market and often even patented or patent-pending.

COMPRESSION BEYOND

This feature allows you to significantly expand the GigE bandwidth of your ace 2 R Pro. Lossless compression enables faster frame rates and therefore higher throughput. To find the optimal balance between image size and image quality for your application, you can individually adjust the compression factor and also choose an even stronger, but then lossy compression.

More information: baslerweb.com/compression-beyond

PIXEL BEYOND

With this feature you can change pixel sizes yourself and simulate certain sensor characteristics, such as those of discontinued sensors for example, which allows for an uncomplicated redesign. Based on a novel interpolation method developed by Basler, Pixel Beyond overcomes the limits of conventional binning by allowing the use of decimal numbers in addition to integer factors. This results in significantly more flexibility.

More information: baslerweb.com/pixel-beyond

Watch our simpleshow video to learn all about the benefits of the ace 2 camera series and Basler's Beyond features.

EVEN THE BEST CAN GET BETTER.

ACE 2. ENGINEERED FOR YOU.

ace 2 R Basic

Basler's proven reliability with extensive computer vision feature set for standard machine vision applications.

Highlights:

- Optimized hardware meets state-of-the-art CMOS sensor technology
- Powerful computer vision feature set
- Unbeatable price/performance ratio for standard vision applications
- Available with 5GigE interface

ace 2 R Pro

All the benefits of the ace 2 R Basic plus PGI feature set plus new, unique Beyond features for maximum performance.

Highlights:

- Compression Beyond for higher bandwidth on GigE using lossless compression
- Pixel Beyond for uncomplicated sensor redesign through individual adjustment of pixel size and sensor characteristics
- Popular PGI feature set from Basler included

ace 2 X visSWIR

Short-wave infrared (SWIR) cameras allow a view of what lies beneath the surface and is hidden from the human eye.

Highlights:

- Image acquisition in the visible and invisible light spectrum with wavelengths from 0.4 μm to 1.7 μm
- Equipped with the highly sensitive Sony IMX990/991 SenSWIR sensors
- Small housing with proven 29 mm x 29 mm footprint
- Large selection of suitable visSWIR image processing components

ace 2 R Basic

ace 2 R Pro

ace 2 X visSWIR

Basler ace

Small, affordable and highly productive

High quality and performance, low list prices from 199 € and small cases with 29 mm×29 mm as well as 30×40 mm footprints: This combination makes the ace one of the top-selling cameras, with thousands of satisfied customers. With more than 130 models, the ace series is the largest camera series in the industrial image processing market

Highlights

- Broadest selection in the industry offering various resolutions, speeds, interfaces and sensors from all leading manufacturers
- State-of-the-art CMOS sensor technology
- High value-add features

SERIALPORT

ace Classic Keyfacts

The ace Classic includes camera models with CMOS sensors from ams, e2V and onsemi (MT line) as well as CCD sensors from Sony. It offers a broad selection of interfaces (USB 3.0, GigE, Camera Link) and covers resolutions from VGA to 14 MP.

- First of its kind and the most successful camera series in the Machine Vision market
- Standard Feature Set

GigE
VISION

USB
VISION

ace U Keyfacts

With speeds of up to 751 fps and the latest CMOS sensors from Sony (Pregius, STARVIS, Exmor R) and onsemi (PYTHON), the ace U represents the next evolution of the ace in the areas of sensor technology and firmware features.

- Advanced Feature Set including PGI, a unique feature combination, consisting of 5×5 Debayering, Color-Anti-Aliasing, Denoising and Improved Sharpness

PGI

GigE
VISION

USB
VISION

ace L Keyfacts

The ace L profits from the same evolutionary steps in firmware features as the ace U. Furthermore, it is capable of carrying high resolution 9 and 12 MP Sony Pregius CMOS sensors with optical formats above 1".

- Brilliant image quality at speeds of up to 42 fps
- Advanced Feature Set including PGI, a unique feature combination, consisting of 5×5 Debayering, Color-Anti-Aliasing, Denoising and Improved Sharpness

PGI

PGI Feature Set

All cameras within the ace U and ace L product line come with Basler's powerful in-camera image optimization PGI that improves your images at the full speed of your camera. It is a unique combination of 5×5 Debayering, Color-Anti-Aliasing, Denoising and Improved Sharpness. This gives you the opportunity to get the best pictures directly from your camera without any

additional processor load. Use the options of the Basler pylon Camera Software Suite to enable PGI, or change settings for selected PGI components for optimal results.

Learn more about PGI at
baslerweb.com/PGI

ALL YOU NEED IS **ACE.**

ANY INDUSTRY. ANY NEED. WITH MORE
THAN 130 MODELS THERE'S AN ACE FOR IT ALL.

ACE USB

Product Group Specifications

Interface	USB 3.0
Housing Size [L × W × H]	ace Classic/ace U: 29.3 mm × 29 mm × 29 mm, ace L: 35.8 mm × 40 mm × 30 mm
Housing Temperature	0 °C - 50 °C ¹
Typical Weight	< 80 g
Lens Mount	ace Classic: C- or CS-mount (depending on model), ace U/ace L: C-mount
Power Supply	Via USB 3.0 interface
Digital I/O	1 opto-isolated input + 1 opto-isolated output + 2 Fast-GPIO (configurable as In/Out)
Power Suspend Mode	Yes, less than 0.02 W, configurable
Synchronization	Via hardware trigger, via software trigger or free-run
Exposure Control	Via hardware trigger ² or programmable via the camera API
Conformity	CE, RoHS, GenICam, USB3 Vision, IP30, UL, FCC, KC, EAC
Driver	Basler pylon Camera Software Suite or 3rd party USB3 Vision Software
Operating System	Windows, Linux, macOS

¹0 °C - 60 °C for acA2040-90um/uc, acA2040-90umNIR.

²Not applicable for ace models with sensors of the MT line from onsemi.

Basler boost

A Camera Series with Two Product Families - boost V and boost R

The boost is our first camera with a CoaXPress 2.0 interface that offers its users an unprecedentedly high bandwidth for data transfer. New CMOS sensors are combined with the latest frame grabber technology. This leads to easy and fast transmission of large amounts of data over long distances – for an extraordinary price/ performance ratio.

Evolve with CoaXPress 2.0 (CXP-12)

With the boost series, Basler is one of the first camera manufacturers on the market to expand its portfolio with a camera featuring the CoaXPress standard in its version 2.0 combined with modern CMOS sensor technology. High speed, high resolution and easy cabling are just some of the advantages of this match of latest technology developments. Upgrade your Camera Link or CXP-6 vision system and reduce your system costs significantly by switching to CoaXPress 2.0 with our boost series.

Evaluation Kit – Everything You Need for Testing

Testing is essential, but it's also a hassle, and can slow down your project plans, especially when dealing with new interface versions like e.g. CoaXPress 2.0. Therefore, we provide not only camera and interface card, but also all suitable vision components for your test scenario including CoaXPress cable, I/O cable, heat sinks and lens mount adapter. For more information on the CXP-12 interface cards, please see [page 52](#).

Highlights

- Broad range of sensors from Sony 2nd (Pregius) to 4th generation (Pregius S), XGS series sensors from onsemi, and new GPIXEL series sensors.
- High bandwidths at maximum cable lengths (12.5 Gbps per channel), scalable up to 50 Gbps with 4 channels, ensuring maximum system speed and flexibility.
- Impeccable image transmission via powerful CoaXPress 2.0 (CXP-12) interface
- Reduced complexity due to a single SDK (pylon) for camera and Basler CXP-12 interface card. Implementation is fast and easy (plug and play)

For more information, please visit baslerweb.com/boost

BOOST

Product Group Specifications

Interface	CoaXPress 2.0 (CXP-12)
Housing Temperature during operation	0 °C - 50 °C
Typical Weight	400 - 480 g
Lens Mount	Flexible mount concept (e.g. adapters available for C-mount, F-mount, M42×0.75 and M42×1)
Power Supply	PoCXP or 24 VDC
Digital I/O	1/2 inputs, 2 GPIO
Synchronization	Via hardware trigger, via software trigger, or free-run
Exposure Control	Via hardware trigger or programmable via the camera API
Conformity	RoHS, CE, GenlCam, KC, UL, EAC ¹ , CoaXPress 2.0
Driver	Basler pylon Camera Software Suite
Operating System	Windows, Linux (64-Bit)

¹ Only for selected models, please refer to our website baslerweb.com/boost for detailed information.

Basler beat

High speed and high CMOS image quality combined in a proven design

The convincing argument for this advanced camera family starts with its superior image quality even at high image capture rates and high resolutions. The Basler beat series uses the high-speed and very sensitive CMOS sensor CMV12000 by ams. It features both a mono and color model with a full resolution of 12 megapixels with progressive scan and global shutter technology. This CMOS sensor yields far better image quality than the older CMOS sensors. Its output is easily comparable to the image quality created by CCD sensors.

Highlights

- Ideal fit for price-sensitive applications where high speed and high resolution are a must
- High bandwidth connection for maximum grabbing speed with Camera Link, and compatibility with all common frame grabbers

For more information, please visit
baslerweb.com/beat

BASLER BEAT

Product Group Specifications

Interface	Camera Link
Housing Size [L × W × H]	40 mm × 56 mm × 62 mm
Housing Temperature during operation	0 °C to +60 °C
Typical Weight	210 g
Lens Mount	F-mount, M58 x 0.75, M42 x 0.75, M42 x 1
Power Supply	12-24 VDC
Digital I/O	Via camera control signals (max. 5)
Synchronization	Via hardware trigger, via software trigger or free-run
Exposure Control	Trigger width, timed or off
Conformity	CE, RoHS, GenICam, IP30, UL, FCC, Camera Link, KC, EAC
Driver	Basler pylon Camera Software Suite or 3rd party Camera Link Software
Operating System	Windows, Linux, macOS

Basler pulse

A compact and low weight camera, with elegant design

The pulse series stands out, starting with a sharp, robust metal housing including tripod adapter and a CS-mount which can easily be converted to C- or S-mount. pulse cameras are equipped with the USB3 Vision plug and play interface and offer great stability and impressively low power consumption – only 1.3 watts. These and other features make the pulse a very compact solution for easy system integration as well as for the switch from analog to digital vision technology.

Highlights

- Sharp design with elegant, lightweight and small-size metal housing
- Most pristine and colorful images with high-quality CMOS sensors with global and rolling shutter options
- Resolutions from 1.2 to 5 MP and up to 60 fps
- Including PGI feature set

For more information, please visit baslerweb.com/pulse

PULSE

Product Group Specifications

Interface	USB 3.0
Housing Size [L × W × H]	38.8mm × 28.2mm
Housing Temperature during operation	0 °C - 50 °C
Typical Weight	< 60g
Lens Mount	CS-mount
Power Supply	Via USB 3.0 interface
Digital I/O	-
Synchronization	Free-run
Exposure Control	Programmable via the camera API
Conformity	FCC Class B, CE, RoHS, GenICam, UL, USB3 Vision, KC ¹ , EAC
Driver	Basler pylon Camera Software Suite or 3rd party USB3 Vision Software
Operating System	Windows, Linux, macOS

Basler dart

With its single-board design, the Basler dart camera series offers the latest technology in a small form factor. The dart not only scores points with its compact design, but also with its excellent price/performance ratio and flexible integration capabilities: The camera modules can be connected to a single board computer (SBC) via USB 3.0, for example, or directly to a SoC (System-on-Chip) or FPGA (Field Programmable Gate Array) via MIPI based data transmission. This allows the dart cameras to be used for a variety of embedded and machine vision solutions.

Image Signal Processing: on the camera or on the processing unit, just as required

dart cameras provide in-camera image pre-processing performed by an integrated Image Signal Processor (ISP). For those embedded systems that already provide an ISP we offer camera modules without ISP but with drivers utilizing the host's ISP – resulting in the leanest solution and a cost optimized set up.

Highlights

- Smallest board level cameras with extremely low weight and low power consumption
- Bare board: just 27 mm×27 mm and 5 g in weight; S- and CS-mount: only 29 mm×29 mm at 15 g
- Popular CMOS sensors from Sony, onsemi and e2v with resolutions from 1.2 to 13 MP and up to 160 fps
- USB3 Vision: Plug and play with a single cable solution compliant with industry standards
- Basler BCON for MIPI interface tailor-made for MIPI CSI-2 connections
- Excellent color reliability and image adjustment features for color-critical applications
- Best-in-class image pre-processing like debayering, denoising, improved sharpness, and more

For more information, please visit
baslerweb.com/dart

Image processing in on-camera ISP

With on-camera ISP: Bare board and S-mount models with BCON for MIPI interface and 5 or 13 MP resolution. Here, specific drivers for NXP®'s i.MX 8M Mini, 8M Quad, 8QuadMax and NVIDIA®'s Jetson™ platform are available as a standard.

Image Processing in host ISP

Uses the ISP of NXP®'s latest processing board i.MX 8M Plus: The new 8 MP dart BCON for MIPI camera module features a premium 4K sensor with excellent High Dynamic Range (HDR) from onsemi. Further SoCs with integrated ISP can be supported upon request.

Basler racer

Exceptional line scan performance - low space requirement

Highlights

- Superior speed, reliability and image quality combined with low space requirement and highly attractive pricing
- CMOS sensors with 2k to 12k resolution and up to 80 kHz line rate
- Perfect fit for a wide range of applications — including multi-camera systems

For more information, please visit baslerweb.com/racer

Embedded Vision Meets Simplicity

We focus on the simple integration to embedded vision systems. In this way, we help our customers to develop applications that create a safer and smarter future.

Combining embedded design and vision technology is a rising trend. Embedded vision will replace a variety of PC-based image processing solutions and at the same time enable a number of new applications in which small size, low power consumption and low costs are important.

Basler Embedded Vision Solutions: We Bring Your Idea to Life

To do so we support you in every step for the realization of your embedded vision application: from consulting to development, production and life cycle management. Our broad product portfolio gives you everything you need to set up a system, and our software gets everything up and running immediately.

One-Stop Shopping: Your Benefits with our Embedded Vision Solutions

- Expert knowledge in vision technology: more than 30 years of experience in image processing
- Competent consulting and support in the development of your embedded vision system
- Broad product portfolio: Camera module, processor unit and application software from one source
- Integration: Extensive software and IoT competence

Basler Embedded Vision Kits

Our standard is your starting point

As a standard, we have enabled specifically suited hardware and software components and put them together in our kits. They offer everything you need to evaluate our dart camera modules, the platform and their various interface technologies so they can be designed in easily. This way, you can start your embedded vision project as hassle free as possible! Our Embedded Vision Kits are powered by:

The first four kinds of Embedded Vision Kits all feature a dart color camera module with S-mount, a lens and necessary cabling. The Processing Kit does not include a camera, lens or cable.

Highlights

- Ready-to-go with pre-installed BSP (Board Support Packages) and sample implementation
- pylon Software Development Kit (SDK) for the simple creation of applications in different programming languages

For more information, please visit baslerweb.com/embedded-vision

Evaluation Kit: USB 3.0 Interface

- Due to the USB 3.0 interface, the Evaluation Kit is an easy to install vision kit that works on every PC hardware and embedded system with USB 2.0 or USB 3.0 connector.
- For easy evaluation of camera utilization and pylon Software Suite features.

KIT	SENSOR	RESOLUTION [MP]	FRAME RATE [FPS]

Basler MED ace

Basler MED ace area scan cameras are our first camera series specifically designed for Medical & Life Sciences. They are also the perfect answer to the discontinuation of CCD sensors. Equipped with CMOS sensor technology at its best, the MED ace delivers even better image quality at much lower costs than CCD cameras.

With Sony's powerful PREGIUS sensors and exceptional PYTHON sensors by onsemi, the MED ace stands out with up to 164 fps and 20 MP, pixel sizes up to 5.86 µm and sensor sizes up to 1.1 inch.

Highlights

- Area scan camera specifically designed for Medical & Life Sciences
- Including Basler's powerful MED Feature Sets
- Latest CMOS technology with Sony PREGIUS and onsemi PYTHON sensors
- Ideal for applications such as microscopy, laboratory automation, ophthalmology

For more information, please visit baslerweb.com/MEDace

Basler's Powerful MED Feature Sets

Our unique and industry-leading MED Feature Sets for Medical & Life Sciences deliver everything that our customers are looking for. They combine market-leading hardware, firmware and pylon software features:

Brilliant Image

Perfect Color

Dust Protection*

Low Light Imaging

Industrial Excellence

High Speed

We developed these unique features specifically to address the high imaging demands in Medical & Life Sciences and to reduce our customers' development efforts.

Basler MED Feature Sets in Brief

Brilliant Image

You get best quality pictures from the first time you activate the camera because MED ace cameras have optimal wake-up settings, Basler's PGI algorithm and auto-image functions.

Perfect Color

Design the color reproduction of your picture yourself: e.g., by adjusting the settings for hue, saturation, brightness and contrast over the entire picture as well as for individual colors.

Dust Protection*

We ensure high cleanliness by sealing the sensor room, producing the MED ace separately in a clean-room and strictly testing selected components for dust and other particles during assembly.

Low Light Imaging

Thanks to modern CMOS sensor technology and our mode for long exposure times, you produce best quality images even in low light.

Industrial Excellence

Our tested high quality cameras together with our pylon software package, our extended camera control functions and our individual customer support enable easy camera integration.

High Speed

Global shutter, CMOS sensor technology and USB3 Vision interface technology enable frame rates of up to 164 frames per second with the MED ace.

Basler PowerPack for Microscopy

Highlights

Plug-and-play package for microscopy with all necessary components at hand:

- Microscopy camera with the latest CMOS sensors (Microscopy ace and Microscopy pulse)
- Professional microscopy software for image acquisition and analysis
- Quick Install Guide for quick and easy startup
- Compatible and tested accessories

For more information, please visit
baslerweb.com/powerpack-for-microscopy

MICROSCOPY ACE & MICROSCOPY PULSE

Product Group Specifications

Interface	USB 3.0
Housing Size	Microscopy ace (L×W×H): 29.3 mm×29 mm×29 mm, Microscopy pulse (d×L): 38.8 mm×28.2 mm
Housing Temperature During Operation	0 °C - 50 °C
Typical Weight	Microscopy ace: 80 g, Microscopy pulse: 60 g
Lens Mount	Microscopy ace: C-mount, Microscopy pulse: CS-mount
Exposure Control	Automatic, manual
Conformity	CE, RoHS, GenICam, USB3 Vision, UL, FCC Class B, KC ¹ , EAC
Driver	Basler Microscopy Software, Basler Video Recording Software
Operating System	Windows 7, Windows 8.1, Windows 10 - 32 bit and 64 bit

¹Only for selected models, please refer to our website baslerweb.com/powerpack-for-microscopy for detailed information.

Basler 3D Cameras

We offer 3D solutions based on the Time-of-Flight (ToF) technology, which are suitable for the mass market and help our customers lower their total system costs and design their 3D applications more efficiently. The biggest benefit of Time-of-Flight Cameras is that they are compact, precise and affordable, yet less complex than other 3D cameras. Beyond this, a time-of-flight camera requires neither contrast nor additional light to work, and can be used on the fly, as objects move past.

Basler blaze

The fully-calibrated blaze 3D camera with integrated optics and GigE interface uses the time-of-flight principle to capture scenes and objects at a glance, generating 2D and 3D data with a multipart image from distance, intensity and confidence maps in real time. Elimination of moving components means robustness and stability for a variety of applications such as robotics, industrial automation, logistics and medicine. With integrated Sony DepthSense™ sensor technology the blaze makes 3D measurements more precise, accurate and faster.

Highlights

- Top-class precision by Sony DepthSense™ IMX556 sensor and advanced laser technology (940 nm or 850 nm)
- Precise, millimeter-accurate optical measurement with the time-of-flight method
- Real-time streaming of 3D point clouds and grayscale images with 30 frames per second
- Daylight robust (940 nm) & independent of ambient light
- IP67 protection and shock-proof for stable results under difficult conditions

For more information, please visit baslerweb.com/blaze

CAMERA MODEL	BLAZE-101	BLAZE-102
Sensor	Sony DepthSense™ IMX556	
Resolution	640 × 480 @ 30 fps	
Wavelength	940 nm	850 nm
Interface	GigE Vision, GenICam	
Field of View	67° × 51°	
Range	0 m - 10 m	
Accuracy (typical)	±5 mm (0.5–5.5 m)	
Housing Size	100 mm × 81 mm × 64 mm	
Conformity	CE, FCC, RoHS, REACH, IP67, Laser Class 1 IEC60805-1:2014, EAC ¹	
Software Support	pylon, Isaac, OpenCV, HALCON, MIL, Point Cloud Library (PCL), ROS, ROS2	

¹Only for selected models, please refer to our website baslerweb.com/blaze for detailed information.

TAKE CONTROL OF THE
THIRD DIMENSION

Basler Lenses Give Vision Applications the Required Sharpness

Lenses depict the captured light on a camera's sensor. Combined with a camera and lighting, they are instrumental in determining the image quality. In the worst case, choosing the wrong lens can result in an irretrievable loss in image quality.

When choosing the right lens, the balance between the required imaging performance, i.e. high resolution with optical image quality, and price is of real interest. A very good imaging performance saves processing time in the further image analysis software and in many cases makes the analysis of even finest structures possible in the first place. If a basic imaging performance and average optical errors are acceptable or if these errors can actually be corrected through image processing, cost-efficient lenses are a better choice.

Whether there are high standards in terms of image quality or a focus on lower costs due to competitive pressure, Basler offers two product lines for both scenarios. The Standard product line stands for the best price/performance ratio and offers good basic performance. The Premium product line offers optimal imaging quality with much higher optical resolution but without neglecting the cost factor.

Both product lines support popular image circles of sensors available in Basler cameras, from 1/2.5" to Super 35 format, as well as all common focal lengths. The lenses are equipped with F-mount and C-mount and can also be conveniently used with CS-mount cameras with the help of an adapter.

For more information, please visit
baslerweb.com/basler-lenses

Highlights of the Basler Standard Lenses

- Excellent price/performance ratio
- Solid basic performance
- Suitable for simple vision applications and price-sensitive systems
- Ideal for fast cameras with a low resolution

Highlights of the Basler Premium Lenses

- Designed and tested for the most demanding applications
- Best quality: very high resolution, low distortion, low vignetting
- Optimal for cameras with very high resolutions for the analysis of the smallest structures
- Still cost-optimized

Need Help Selecting the Right Lens for Your Application?

Find the right lens for your Basler camera! Several suitable lenses for your application are suggested to you based on data such as focal length, angle of view, working distance or object size.

Test our convenient Lens Selector: baslerweb.com/lens-selector

THE **RIGHT LIGHTING** FOR YOUR VISION APPLICATION

Spot on with Basler Lighting Solutions.

Lighting plays a crucial role in a vision system. The correct light, combined with other image processing components (such as the camera and lens), delivers the best possible results for your vision system. There is no other component in a vision system that can fully compensate for poor lighting. Choose the right light early in the design process to ensure excellent performance while saving time and money. With Basler lighting solutions and their highly flexible range of industrial-graded components and system variations, this is now especially easy.

Basler SLP. Reduced Complexity. Simplified Setup. Smooth Operation.

Our unique SLP camera feature will help you save valuable time thanks to the perfect and fully automatic synchronization of camera and lighting. Control your lighting via one single software interface, the pylon Camera Software Suite. Simplify the setup for your vision application, get easy access to the popular strobing and overdrive functions and ensure a smooth operation with Basler SLP. You can choose between three solutions.

Highlights of the Basler Premium Product Line

SLP feature is embedded in pylon Camera Software Suite

- One interface only
- Easy operation

Direct communication between camera and light

- Synchronization of the camera and lighting is fully automatic
- Time savings

Simplified strobing & overdrive

- Longer lifetime or more light intensity achievable even for non-expert users
- Material cost savings

Input voltage	24 VDC (+/-10%)			
Power consumption	3.1 – 4.7 W 5.8 – 7.8 W 11 – 13 W	3.1 – 5.2 W 4.6 – 7.8 W 6.1 – 11 W	6.1 W 15 W	14 W
Lighting modes	Continuous; Strobe incl. overdrive mode			
Pulse width	50 µs – 100 ms			
Pulse step size	10 µs			
Conformity	Lighting: CE, RoHS, IEC 62471 Compliant Product Controller: CE: EN61000-6-2, EN61000-6-4			

BASLER LIGHTING CONTROLLERS - STANDARD

Basler Light Controller 2C-1.25A-50W-24V

Basler Light Controller 4C-1.25A-84W-24V

Lighting modes	Continuous; Dimming mode; ON/OFF Trigger with High / Low active select	Continuous; Dimming mode; ON/OFF Trigger with High / Low active select; DHCP / Web Page Setup
Output current continuous	0.10 A - 1.25 A	0.10 A - 1.25 A
Pulse width	100 μ s - ∞	100 μ s - ∞
Housing size (L x W x H)	100 mm x 93 mm x 125 mm	147 mm x 100 mm x 129 mm
Conformity	RoHS, CE, UKCA, KC, FCC	RoHS, CE, UKCA, KC, FCC, PSE

BASLER SLP CONTROLLER - PREMIUM

Basler SLP Strobe Controller 121040

Lighting modes	Continuous; Strobe incl. overdrive mode
Output current continuous	0.05A - 2A
Output current overdrive mode	10A @200 μ s pulse width
Output voltage range	1.5V - 40V
Pulse width	50 μ s - 100 ms
Pulse step size	10 μ s
Max. frequency	200 Hz
Housing Size [L x W x H]	89 mm x 60 mm x 43,5 mm
Conformity	RoHS; CE; FCC; KC

Frame Grabber Portfolio – High Performance, Reliable and Flexible

Frame grabbers are the control center for robust high-speed image acquisition and processing in real time on FPGAs including image pre-processing, which minimizes the CPU load. Paired with graphic FPGA programming (VisualAp-plets), software and appropriate components, our frame grabbers play a vital role in the success of your individual image processing project.

Frame Grabbers and Accessories

Select the right board for your image processing task from one of the most extensive frame grabber ranges in the market.

The boards excel with robust image capture, image preprocessing, minimal latencies and top speeds for all conventional camera interfaces.

We realize solutions in the field of real-time image processing and industrial use. Frame grabbers have powerful FPGA processors to integrate high-quality image preprocessing functions into the firmware.

For programmable frame grabbers, further FPGA resources and larger memory expansion are available for carrying out even complex image processing directly on the frame grabber without loading the CPU. Our extension products offer new opportunities for building new system solutions, and include signal processing boards, image data replicators, image processing library and many more.

CXP-12 Interface Cards

The CXP-12 interface cards with one, two and four channels are based on the PCIe Gen 3.0 industry standard which delivers high speed access to the memory of the host computer. It enables a bandwidth of up to 12.5 Gbps per transmission channel and seamless plug and play integration of our boost cameras via the pylon Camera Software Suite.

This eliminates the need to install and program an additional SDK for the interface card: simply plug in the card and start image acquisition. All in all, the CXP-12 interface cards significantly reduce both system costs and configuration effort.

Basler CXP-12 interface cards are also available as part of a boost evaluation kit. Please see [page 30](#) for detailed information on our evaluation kits.

Highlights

- High-performance image acquisition cards for all conventional camera interfaces
- High data rates and resolutions are possible, with bandwidths up to 50 Gbps for CXP-12 four-channel frame grabber
- Minimal latencies through image processing in real time
- Variant signal controls between frame grabber and surrounding (cameras, lighting, encoder ...)
- No CPU load thanks to effective image preprocessing

Highlights

- CoaXPress (CXP-12) 1C, 2C, 4C
- up to 6520 MB/s bandwidth via PCIe 3.0 bus
- Low-profile
- Passive heatsink
- Several trigger scenarios through front GPIO
- Fully harmonized with Basler boost cameras
- Simply install and start image acquisition via pylon SDK

CXP-12 INTERFACE CARDS			
	CXP-12 Interface Card 1C	CXP-12 Interface Card 2C	CXP-12 Interface Card 4C
Data Rate	3260 MB/s		6520 MB/s
Interface Host	PCIe 3.0 x4		PCIe 3.0 x8
On-Board Memory		1 GB DDR4-RAM	1.5 GB DDR4-RAM
Size (L × W × H)	PCIe low profile card (167.65 mm × 68.9 mm × 18 mm)		PCIe standard height (167.64mm × 111.15 mm)
Camera Interface	1× Micro-BNC (HD-BNC)	2× Micro-BNC (HD-BNC)	4× Micro-BNC (HD-BNC)
Power Supply	PCIe 6-pin connector 12 V (required for PoCXP)		
Trigger Connector	D-Sub Micro-D 15pin		
Typical Weight	180 g		270 g
Software	Basler pylon Camera Software Suite (version 6.1 or higher)		
Operating System	Windows, Linux (64-Bit)		
Conformity	CE, RoHS, WEEE, REACH, GenICam, EAC ¹ , PCB compliant with UL 94 V-0		

¹ Only for selected models

Tested and Qualified Acquisition Cards for Various Interfaces – Rely on Our Expertise

With acquisition cards you can flexibly connect cameras to the host PC and obtain high-performance and reliable image acquisition via your optimal interface. Our acquisition cards are tested over the product life cycle with common operating conditions and against operating system updates. The advantage is a smooth integration of tested and qualified components into the image processing system and at the same time a noticeable cost advantage.

For more information, please visit baslerweb.com/pccards

USB 3.0 Interface Cards

With the USB 3.0 interface cards with 2 or 4 ports, you no longer have to worry about faulty drivers or operating system updates. Frequently occurring problems are also a thing of the past, such as when the PC's host controller has already been occupied with additional peripherals and conflicts occur on the data bus, which in turn lead to data errors or image loss. Furthermore, our vision components are available on the market longer than the chipsets used in common PCs.

USB 3.0 INTERFACE CARDS	NO. OF PORTS	CHIPSET	PCIE CONNECTION
USB 3.0 Interface Card PCIe, Fresco FL1100, 1HC, x1, 4 Ports	4	Fresco FL1100	PCIe x1 Gen2
USB 3.0 Interface Card PCIe, Fresco FL1100, 4HC, x4, 4 Ports	4	Fresco FL1100	PCIe x4 Gen2
USB 3.0 Interface Card PCIe, Ren, 1 HC, x1, SATA, 2 Ports	2	Renesas	PCIe x1 Gen2
USB 3.0 Interface Card PCIe, ASM, x4, 2 Ports	2	ASM	PCIe x4 Gen3

GigE Interface Cards

GigE interface cards are required when the PC used has only a single LAN port, which is occupied by (for example) the machine controller, or does not have a Power over Ethernet (PoE) function for power supply. Using the GigE interface cards, a single cable solution can be implemented using the PoE function if required, thus enabling a multi-camera system to be developed with reduced system complexity. Depending on the application scenario and the camera used, our portfolio offers corresponding 1GigE interface cards with or without PoE function as well as 10GigE interface cards.

Highlights

- Technology for receiving image data and operating several cameras on one vision PC for the most demanding applications
- Performance optimizations using our pylon SDK and the Basler Performance Driver
- Harmonized for Basler cameras and cable solutions
- Same MAC address space as Basler cameras for easier network management

Basler Standard GigE Interface Cards

- 1GigE with 1, 2 or 4 ports
- 10GigE with 1 port
- Cost-optimized product design

Basler Premium GigE Interface Cards

- 1GigE with 1, 2 or 4 ports with PoE feature
- Ideal for single cable solutions with low installation effort

GIGE INTERFACE CARDS	CONNECTORS	POE (IEEE 802.3AF)	PTP (IEEE 1588)	PC BUS IF
Basler Standard GigE Interface Cards				
Basler 10GigE Interface Card, 1 Port	RJ45x1	no	yes	PCIe x4 (3.0)
Basler GigE Interface Card, 1 Port	RJ45x1	no	yes	PCIe x1 (2.1)
Basler GigE Interface Card, 2 Port	RJ45x2	no	yes	PCIe x1 (2.1)
Basler GigE Interface Card, 4 Port	RJ45x4	no	yes	PCIe x4 (2.1)
Basler Premium GigE Interface Cards				
Basler GigE Interface Card, 1 Port PoE	RJ45x1	yes	yes	PCIe x1 (2.1)
Basler GigE Interface Card, 2 Port PoE	RJ45x2	yes	yes	PCIe x4 (2.1)
Basler GigE Interface Card, 4 Port PoE	RJ45x4	yes	yes	PCIe x4 (2.1)

We maintain a worldwide network of subsidiaries, offices and distributors to ensure that Basler customers always have a knowledgeable contact person in their area.
